

## Top 10 Reasons To Lease Your Solar System

- **100% FINANCING** - No out of pocket costs. No down payment. No additional collateral required. You may also include installation and shipping costs.
- **OPTIMIZE USE OF GOVERNMENT REBATES** - Solar rebates still apply and can be used to reduce lease payments.
- **SAVINGS** - Solar provides continued, long term savings over unending, climbing energy prices, thereby reducing operating costs.
- **PRESERVE CREDIT LINES** - Leasing frees up existing bank lines, reserving your working capital for appreciating assets.
- **OFF BALANCE SHEET** - Most leases are considered 'true leases' for tax purposes, allowing the lease payments to be treated as an operating expense, not a capital expenditure.
- **INFLATION PROOF** - Lease payments are locked-in and therefore not subject to fluctuation with the rise and fall of interest rates.
- **POTENTIAL TAX BENEFITS** - Lease payments may be 100% tax deductible against income. Consult your tax professional for specifics related to your business.
- **EASY APPROVAL** - It is easier to qualify for a lease than a traditional bank loan and leases close faster.
- **FLEXIBLE PAYMENT OPTIONS** - A wide range of lease plans are available to fit the specific needs of your company. Own the system at the end of the lease!
- **IMPROVED ASSET MANAGEMENT** - Fixed costs allow for more accurate, long term planning for growth.
